Assessment Title:
MECH0073 Summer Session

Assessment Outline:
This risk assessment covers the transport and handling of our experimental rig and prototype from MechSpace to UCL East Marshgate. It also includes how they are expected to be used within the presentation and subsequent prototype evaluation.

Area Responsible (for management of risks)	Location of Risks
Division, School, Faculty, Institute:	On/Off Site:
Department:	Building:
Group/Unit:	Area:
	Sub Area:

Further Location Information:
Floor 4, occupying a space within the large design studio.

Is additional GM or HG approval required? Only relevant to specialist biological risk assessments (GMM2, GMM3, HG2, HG3, GM animals, GM plants) except GMM class 1.
GMM Class 2, GMM Class 3 or Hazard Group 3 Risk Assessment

1. Transport

Transport of experimental rig and prototype from MechSpace to Marshgate before the summer session, and from Marshgate back to MechSpace the day after.

Hazard 1. Manual Handling

Both the experimental rig are fairly big and contain aluminium parts, thus having non-negligible size and bulk, which may pose an issue when moving or handling them

Existing Control Measures

Neither the rig or the prototype weigh more than 5kg individually, so each should be carried by one person, while another helps to navigate through crowds and doorways if necessary.

Apply correct manual handling technique, keep load close to the body, avoid twisting the torso whilst carrying.

Hazard 2. Fasteners and other small components

Both the prototype and experimental rig have many small components and fasteners in them, which may fall off and cause a trip hazard if left unsecured or loose.

Existing Control Measures

All small parts and fasteners are tightened or attached sufficiently so that they do not fall off/loosen during transport.

Hazard 3. Sharp edges and protrusions

Both the prototype and the experimental rig have some sharp edges due to aluminium parts. The rig also some protruding rods which are part of an assembly for a height adjustable platform.

Existing Control Measures

Sharp edges and protrusions will be covered with rubber tape before transport.

Reference: RA132031/1
Status: Authorised

Team members are aware of them and will carry them appropriately if needed to.

Transport is mainly done by vehicle so overall minimal human intervention apart when at Marshgate.

Risk Level

With Existing Controls

Risk Level: B - Low / Tolerable
